Custom Attachments for Heavy Equipment, Welding Repairs and Alterations

Memo Re: Bucket Lifting Loops

May 7, 2001

Standard Nye bucket loops are provided as a customer convenience and are not rated for any particular load. They are designed for lifting the bucket and for securing the machine or bucket on a float during transport. Nye lifting loops are made of 44W or QT100 steel plate.

Optional “load rated” Gunnebo lifting hooks with spring latches are available at extra cost. These weld-on hooks are rated at 10t, 14t and have a 5:1 safety factor. Gunnebo hooks can be specified at the time you order your bucket or can be installed on existing buckets in the field.

Contact our office for availability.
