TL7 Tilt Bucket

Hydraulics

Control valve features:
- Load holding (bucket stays put).
- Pressure relief (prevents cylinder damage).
- Speed control (prevents slamming).
- Hose management (multiple configurations left, right or one on each side).

Nye TL7 Tilt Bucket:

Our latest designs now feature a super strong one-piece T1 front beam and heavy-duty double acting hydraulic cylinders mounted low on the back where they belong, not the top or inside a compartment.

Most models come with bolt-on edges and feature a new on board hydraulic control valve that provides load holding/relieving, speed control, side hose hookup and hose management functions.

Nye tilt buckets have a 90° tilt range, 45° left and 45° right.

Nye tilt buckets are easy to install, safe, silent to operate and are available in quick coupler and pin grabber versions.
